

# Software Beyond Borders

**Bring your talent, passion and  
commitment in our skillful team.**

● Keep IT Simple!

## Does your focus match ours? Custom software development for customers worldwide using latest technologies

Ropardo custom software development services cover the complete development life cycle to build a solution from the ground, migrate an existing product to a new platform or re-engineer an existing solution using modern technology.

We master Cloud, Big Data, Web, Mobile and DevOps technologies to build commercially efficient software that enables users to transform their vision into actions.

## They've already chosen Ropardo's innovation spirit:

### Iulia, ERP consultant

"After 6 years I still enjoy working for Ropardo! My colleagues are great; there is diversity of projects which allows us to grow professionally. We learn new things all the time; we are trained, so there is no routine. And what I appreciate most is that when one of us has a new idea, it is always taken into account by the management and you really feel like an important player in Ropardo team."

### Flaviu, PHP programmer

"I joined Ropardo 1 year ago as an Academy trainee. I liked Ropardo right from the start because they gave me the chance to actually gain knowledge and practice. I also liked being paid as a part-time employee during the training and, after graduation, stayed in the team. Now, what I most like about my job is that we work in teams and I learn new things every day so it never gets boring."

### Geza, team leader

"Working with Ropardo means my highest professional achievement that ensured me a decent life as an engineer. The 10 years that I can count in this company do not prevent me from being challenged every day and with every project. I can say that I am living my years of professional acknowledgment and I am planning to make the most of them."

## This could be your successful story

Today's world is changing fast and innovation is the key element to ensure customer success.

Our **open invitation to you is to bring your talent in, working with us on challenging projects** for customers operating all around the world, in a variety of industries.

**Say hello to us and we might just find something that ticks YOUR requirements.**
