

## About

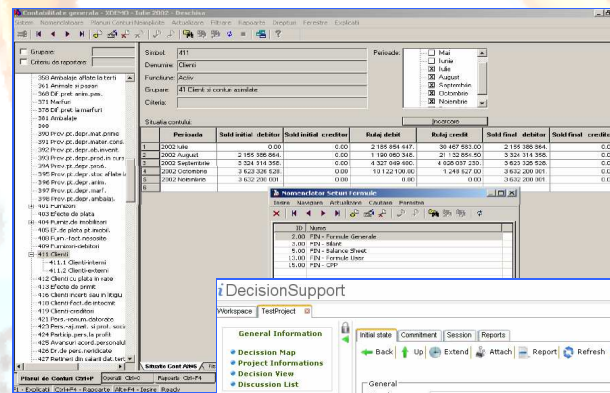

m-Business aims to develop a collaborative virtual environment addressing the critical needs of SMEs. The result will be an intelligent web-based solution, modular and flexible, focused on a centralized knowledge repository, and running a series of integrated processes following PRINCE2 project management methodology.

The digital environment will include modules such as: project management, document management, customer relationship management, group decision support system, enterprise resource planning. A set of collaborative services will support an efficient communication, decentralization and delocalization, mobility, organizational intelligence.

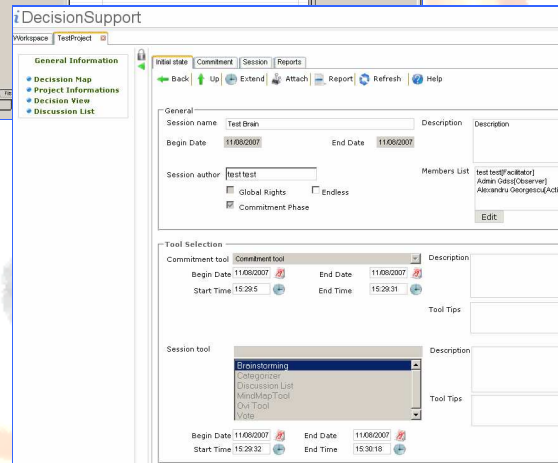

m-Business promotes the principle of added value through innovation, considering the premises that there are no limits for performance and progress when talking about SMEs.

Project Management

ERP

Decision Support System

## Innovative features

- The open collaborative platform supporting further integration and developments: it eliminates the necessity of buying licenses specific to client applications, thus reducing the acquisition costs.
- Decisional system based on divided plans theory, supporting user's intentional attitude.
- Centralized knowledge warehouse at the level of the entire platform, with a role in creating an organizational memory.
- Integration of collaborative services (mail, calendar) and of a well known project management methodology (PRINCE2), enhancing the processes that run within each module.
- Enhanced functionalities for knowledge sharing and data mining.
- Multiple integration: employees (multiple access), information (business intelligence, knowledge management), processes.
- Processes' automation via implementation of a workflow system.
- Collaborative knowledge management: differentiated access to information, therefore increasing the degree of business intuition.
- Total mobility through e-work, and e-office: anybody, anywhere, anytime, anything.

mBusiness is a virtual location with a dashboard-like interface integrating all software modules and therefore offering the user a central information point.

## iSecurity

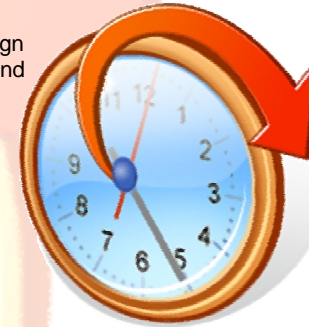

**User and Role Management** provides identity management, multi-layered and object security to ensure that only users authorized to access sensitive business information are provided access. Standard-based authentication with industry leading LDAP Directory Servers and Single Sign On (SSO) providers – this means user and group information is managed and maintained within the corporate security infrastructure.

Compte	Description	Debit	Credit	Saldo	Debit	Credit	Saldo
100000	Capital		100000	100000			100000
100100	Capital		100000	100000			100000
100200	Capital		100000	100000			100000
100300	Capital		100000	100000			100000
100400	Capital		100000	100000			100000
100500	Capital		100000	100000			100000
100600	Capital		100000	100000			100000
100700	Capital		100000	100000			100000
100800	Capital		100000	100000			100000
100900	Capital		100000	100000			100000
101000	Capital		100000	100000			100000

## iFinance – ERP

iFinance is a warehouse management application build to increase the efficiency of the SME through easy exploitation and quickly answer from accounts information. Was design according to actual accounting settlements and is flexible for future modifications of the legislation.

## iDocument

Within your organization, **you need to share information** contained in a large number of documents. **You want to create an electronic document database** where each document is carefully indexed according to keywords, archived, fully secure and available to the system's users.

**iDecisionSupport** is a web-based application that provides support to the group decision making process with tools that facilitate brainstorming, idea generation, organization, prioritization, and consensus development.

Criteria	Option 1	Option 2	Option 3	Option 4
Criteria 1	Value 1.1	Value 1.2	Value 1.3	Value 1.4
Criteria 2	Value 2.1	Value 2.2	Value 2.3	Value 2.4
Criteria 3	Value 3.1	Value 3.2	Value 3.3	Value 3.4
Criteria 4	Value 4.1	Value 4.2	Value 4.3	Value 4.4
Criteria 5	Value 5.1	Value 5.2	Value 5.3	Value 5.4

Because the tools are web-based, you can choose whether you want to gather participants in a conference room, set up a distributed meeting or a mixture of both. You decide whether the meeting should be real-time or whether participants will contribute their ideas when their schedule allows.

## iManagement

The solution addresses organizational needs within various business sectors, and it aims to optimize the internal processes via thorough resource planning, tracking and control.

One of its main competitive advantages consists in the possibility of managing multiple projects in the same time, considering the same human resources, fixed deadlines and budgets.
